## Evening Brief

Date: Thursday September 14, 2017

---

### Weather Summary

An advancing cold front will bring widespread showers and thunderstorms to much of eastern ID/western WY and Utah on Friday along with high elevation snow and much cooler temperatures.

Post frontal Northwest winds will increase over ID/northern NV/UT/WY on Friday with gusts 30-40 mph, with RH still above 15-20%. Pre-frontal gusty southwest winds with gusts 30-40 mph are expected on Friday over southern/eastern UT, however RH will remain high with showers/thunderstorms.

A drying trend is expected this weekend, but another strong and even colder storm is expected Sunday into early next week, dropping temperatures to nearly 20 degrees below normal and bringing additional wetting rains, high elevation snowfall and gusty winds.

---

### Preparedness Levels

Great Basin	3
National	5

---

### Great Basin Fire Activity (from Irwin): Moderate Activity

**New Fires and Acres: 29 fires for 1,295.3 acres; 1,204 acres large fire growth; 2 new large fire**

---

### Resources:

- Crews: 6 T1 IHCs in GB: 4 Committed, 2 R&R.
  - GBCC has committed an estimated 47+ Type 3, 4, 6 engines.
  - 1-T1 and 4-T2 helicopters are available in GACC.
- 

### Great Basin Fire Potential Summary

Moisture with thunderstorms and prolonged higher humidity over the past week has significantly moderated fuel conditions across the region. Significant precipitation will overspread the region during the next few days, which will cause fire danger indices to decrease rapidly, especially across the eastern Great Basin. Portions of far western NV and western Idaho will see a drying trend and may continue to have the potential for new fire starts over the weekend.

There is no long term drying trend in the forecast. A brief drying this weekend will be replaced by an even stronger and colder storm system early next week.

---

## Current Incident Details
